DETAILED ACTION

This Office action is in response to the application filed April 18, 2001.

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 13-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 2-17 of U.S. Patent No. 6,346,359 (YAMADA et al). Although the conflicting claims are not identical, they are not patentably distinct from each other because the claimed recording material in the U.S. Patent 6,346,359 anticipates and meets recited claims 13-20 for a recording material comprising a support, and at least one recording layer containing a diazo compound and a coupler which reacts with the diazo compound for developing color, wherein the coupler has a leaving group at a coupling position.

YAMADA et al claims a coupler having a leaving group defined by "L" in the formula used in a recording material, see claim 2. The claims of the prior art also meet the recited limitation of claim 14 wherein the prior art couplers possess the same leaving groups as disclosed in the application, thus inherently meeting the coupling reaction rate as recited in claim 14.

Application/Control Number: 09/836,236

Art Unit: 1752

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claims 1-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The language found in claims 1 and 2 fail to particular point out and establish clear metes and bounds for the desired protection. The metes and bounds are unclear with based on the recited relative coupling reaction rate because rather than state the rate or recite the structure of the coupler, applicants use a comparison to a coupling rate between a diazo compound and a coupler having a *haydrogen* [hydrogen] atom at the leaving position. This language is unclear and fails to set the metes and bounds to the claims such that one skilled in the art attempting to avoid infringement would not know what the coupling rate of the reaction rate would be because of the numerous possible reaction conditions, such as the surrounding variables and variables within the reaction pot.

Correction is necessary with respect to reciting language to establish clear metes and bounds for the claims.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. NOMURA et al, KAWABUCHI et al, and MATSUSHITA et al disclose coupler compounds having hydrogen at the leaving group position on the compound.
